LONDON:

PRINTED FOR THE ZOOLOGICAL SOCIETY
SOLD AT THEIR HOUSE IN REGENT'S PARK
MCMXXXVII.

Papers and Memoirs intended for this work should be addressed to "THE EDITOR of the Zoological Record, Zoological Society, Regent's Park, London, N.W. 8." It is earnestly requested that in the case of separately-printed copies of papers so forwarded, the *original pagination* may be indicated.

PREFACE.

THE seventy-third Volume of the Zoological Record will be ready for distribution in January. It is the first time since its present Editor has been in charge that it has not been published within the year following that for which it is dated. The delay has been unavoidable, and is much regretted by the Editor.

The Record continues to grow larger each year. The present volume contains 1,764 pages of bibliographical matter, an increase of 336 pages as compared with the previous volume for 1935. The number of new genera also shows a considerable increase this year.

There have been a good many changes in the recording staff this year. Dr. Burton found he could no longer undertake the Pisces, though he was willing to continue to record the Porifera (his own special group), as well as the Protochordata. As regards the Pisces, his place has been taken by Miss Trevawas, now on the staff of the Natural History Museum.

Mr. A. K. Totton has handed over the Coelenterata to Dr. H. D. Thomas and Miss Susan Finnegan (now Mrs. Campbell Smith) the Arachnida to Mr. R. J. Whittick, who has recently joined the staff of the Natural History Museum and is now in charge of that group.

Finally, Miss Muir Wood cannot any longer find time to record the Brachiopoda and has been succeeded by Mr. J. K. S. St. Joseph, of the Sedgwick Museum at Cambridge.

To the list of genera is appended a second supplementary list of new periodicals, most of which are new ventures—chiefly from Russia, China and Japan. The last complete list was published in 1935 and contained the names of upwards of 1,500 journals now in course of publication containing papers of zoological importance.

The thanks of the Editor and of the Zoological Record Committee are again due to several specialists who have kindly undertaken the duty of reading the proofs or have helped in supplying references to obscure papers. These are Mr. A. T. Hopwood (Mammals), Dr. E. Mayr and Mr. H. G. K. Molineux (Birds), Mr. J. R. Norman (Fishes), Mrs. Campbell Smith and Mrs. Hughes (Arachnida), Miss I. Gordon (Crustacea), and Mr. J. R. le B. Tomlin (Mollusca).

The accounts of the "Record Fund" are printed overleaf and show a balance to the credit of the Fund of £1,999 16s. 9d.

EXPLANATORY.

This Volume is printed in the Divisions enumerated on p. vii.

The pagination of each Division is separate, and is given at the top corner of the pages. The number and name of the Division is given as a heading on each page. The date 1936 corresponding to the bulk of the literature indexed is given at the top of each page.

In the Subject Index of each Division authors are quoted by name only. The full references will be found in the Title Section of the Division.

The Literature indexed is mainly that of 1936 but includes entries for earlier years that have been received too late for inclusion in previous volumes.

I. COMPREHENSIVE ZOOLOGY

ARRANGED BY

W. L. SCLATER, M.A.

This section includes works that deal with more than one branch of Zoology, or that are of general interest to Zoologists. It is, therefore, not complete in itself as regards any one subject included in it. The special records complete each subject. A few memoirs included in the special records are repeated in this division as well as the literature on the Genetics of *Drosophila* and some other insects used as a vehicle for these special researches.
